

Duplicate Therapy Database™

Improves Clinical Outcomes by Avoiding Unnecessary Therapeutic Duplication

PREVENTS DRUG DUPLICATION

Duplicate Therapy Database™ equips health care providers with accurate, timely alerts to potential duplications in drug therapy. Information in the database is drug-specific, comprehensive and screens for drugs with similar primary indications or active ingredients.

MEETS HEALTH CARE PROVIDERS' NEEDS

- **Supports** Drug Utilization Review (DUR)
- **Identifies** duplications related to ingredients, actions or indications
- **Screens** for drug duplications with abuse potential

Duplicate Therapy Database™

INCLUDES:

- Therapeutic duplications for products used for single and multiple therapeutic purposes
- Ingredient duplications for single and multiple ingredient products
- OTC medication duplications
- Codes identifying duplication class, be it an ingredient, mechanism of action or therapeutic indication
- Significance codes to indicate presence of abuse potential
- Duplication Allowance indicator to specify the number of acceptable duplications before providing an alert

BENEFITS

- *Improves both clinical and financial outcomes by avoiding toxic or unnecessary therapies*
- *Reduces risks by protecting against unintentional drug duplication associated with the combined use of prescription and OTC medications*
- *Enhances the safety of patients being treated by multiple physicians*
